

The BluTag data collection solution is secure from end-to-end, from tag to data storage, processing and reports.

- Data to and from each tag and concentrator is authenticated and encrypted
- Every concentrator, gateway and site manager is registered with and controlled by the BluTag Manager in the cloud
- Separate processes in the BluTag Services record and manage data

Authentication

&

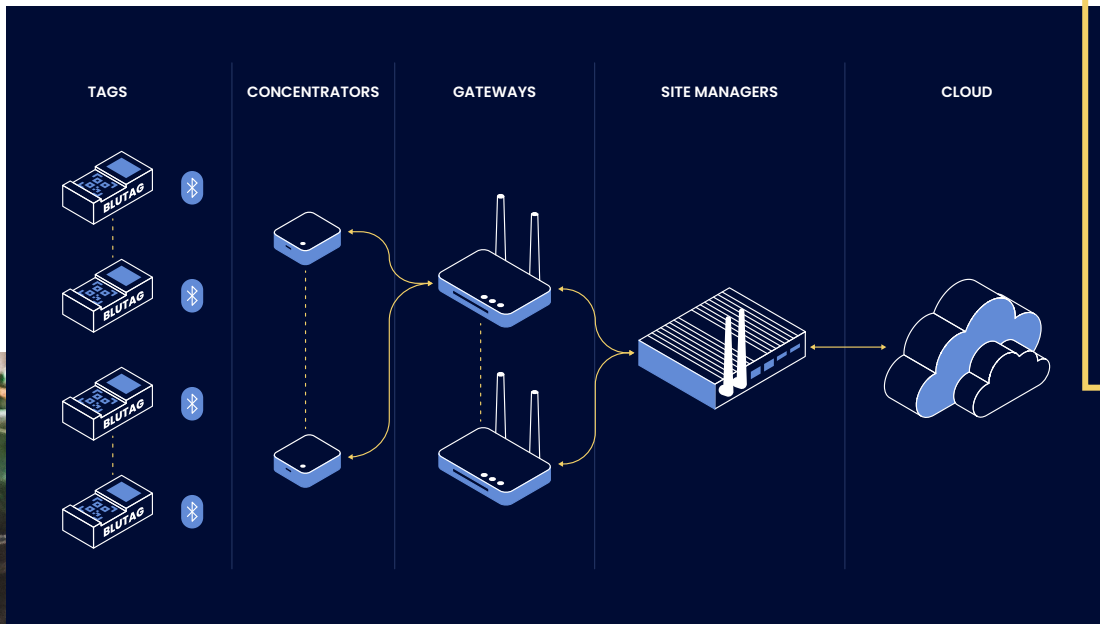

Encryption at the Edge

Leveraging the unique capabilities of BluTag each tag first verifies that it is sending data to an authenticated concentrator and gateway before sending. Gateways do the same to tags. Blu Tag roaming capabilities manage this across zones and facilities, ensuring secure low latency roaming. Data sent each way is encrypted for further security.

Data & Services Security

Blucity's services architecture and implementation are purposefully built to ensure robust, secure, data collection and managed access to data by clients and applications. Separate services manage network control and security, data collection, data security, and permitted access to data and information, Data is encrypted throughout the system including while at rest.

- Blucity provides BLUTAG data collection and network management as a service
- Build your inventory and product safety and tracing applications from the data base up, confident that you are always receiving reliable data

Bluicity is digitalizing logistics chains, automating operations, reducing costs and securing supply.

We excel at live monitoring of assets and goods, and their environments, along with tools optimizing asset use, end customer product quality and delivery satisfaction.
